Purpose of Contact: 900-2 IHSS 153 Oil Burn Pit excavation backfill on main excavation using staged materials

Discussion

All soils from the main excavation were removed and packaged as waste. However, contamination in the eastern extension was deeper. Soil from 8 to total depth of the excavation was removed and packaged as waste. Soil from 0-8 feet will be used as backfill. VOCs and PCB screening results were below WRW action levels.

Some of the area surrounding the excavation will be removed during land configuration. These soils also contain low levels of contamination and will be used to backfill the existing excavation.

These soils will be used as backfill in the northern part of the excavation where HRC-X will be added, including the northeast extension.

Backfill of the initial approximately 110 foot long excavation is approved with HRC-X added to all areas except the southernmost 50 linear feet of excavation. Confirmation samples in this area are all below WRW action levels.
